So, which version of Jailbreak is required for your PS3? Is it version 1.1.0 or later? Check it out from here, it may be the reason why jailbreak is not accepting. With the development of the society, the applications of mobile terminals have changed a lot, and the diversification of services provided by mobile terminals is becoming more and more. So far, mobile terminals of a specific type are configured to execute a few services, such as short message service, voice communication, game, and the like. Because of the limitation of the hardware design, the performance and functions of each service on the mobile terminals are also limited. An intelligent terminal is a mobile terminal with a specific module. The intelligent terminal mainly includes a display module, a sensing module, and a control module. In the control module, a game development module, an information processing module, an embedded operating system, and other program modules may be stored. In a series of research and practice, relevant technologies have been developed, and various solutions are applied to the intelligent terminal. Recently, an intelligent mobile terminal having a fingerprint recognition function is disclosed. The fingerprint recognition function includes a fingerprint input module and a fingerprint sensing module. Generally, a user holds the mobile terminal in one hand and a finger of the other hand on the fingerprint input module, and the user's fingerprint is detected. The fingerprint sensing module stores fingerprints of users to form fingerprint database. When the user inputs a fingerprint, the fingerprint input module and the fingerprint sensing module detect the fingerprint of the user and match the fingerprint with the fingerprint database, to determine whether the user is a registered user or not. As a result, the user is permitted to use the services provided by the mobile terminal. However, the fingerprint recognition function of the existing mobile terminal only provides an authentication function, but cannot transmit fingerprint data. When the user inputs a fingerprint, the mobile terminal can only process the fingerprint as a user authentication, and cannot further obtain data of the input fingerprint. Therefore, the application of the intelligent terminal having the fingerprint recognition function is limited, and it is necessary to design a new intelligent terminal and a new method.(1) Field of the Invention The present invention relates to a liquid ejection apparatus that ejects a liquid from a head, and more particularly to a liquid ejection apparatus that ejects a liquid from a head having a plurality of nozzles and that supplies an ink from the nozzles to a recording sheet as dots, or a liquid 82157476af
